useError

`useError` composable returns the global Nuxt error that is being handled and it is available on both client and server.

```
const error = useError()
```

`useError` sets an error in the state and creates a reactive as well as SSR-friendly global Nuxt error across components. Nuxt errors have the following properties:

Properties

- **statusCode**
Type: `Number`
HTTP response status code
- **statusMessage**
Type: `String`
HTTP response status message
- **message**
Type: `String`
Error message
