

Git Ignore File

A `.gitignore` file specifies intentionally untracked files that git should ignore. Learn more about it in [the git documentation](#).

We recommend having a `.gitignore` file that has **at least** the following entries present:

```
> # Nuxt dev/build outputs
> .output
> .nuxt
>
> # Node dependencies
> node_modules
>
> # Logs
> logs
> *.log
>
> # Misc
> .DS_Store
>
> # Local env files
> .env.*
> !.env.example
```

`.gitignore`
