

useServerSeoMeta

Just like `useSeoMeta`, `useServerSeoMeta` composable lets you define your site's SEO meta tags as a flat object with full TypeScript support.

👉 [Read more in Docs > API > Composables > Use Seo Meta.](#)

In most instances, the meta doesn't need to be reactive as robots will only scan the initial load. So we recommend using `useServerSeoMeta` as a performance-focused utility that will not do anything (or return a `head` object) on the client. Parameters are exactly the same as with `useSeoMeta`
