Installation

Get started with Nuxt quickly with our online starters or start locally with your terminal.

Play Online

You can start playing with Nuxt 3 in your browser using our online sandboxes:

Play on StackBlitz

Play on CodeSandbox

Start with one of our starters and themes directly by opening [nuxt.new](#).

Discover [nuxt.new](#)

New Project

Prerequisites

- **Node.js** – `v16.10.0` or newer
- **Text editor** – We recommend [Visual Studio Code](#) with the [Volar Extension](#)
- **Terminal** – In order to run Nuxt commands

▶ [Additional notes for an optimal setup:](#)

Open a terminal (if you're using Visual Studio Code, you can open an integrated terminal) and use the following command to create a new starter project:

npx **pnpm** **bun**

```
> npx nuxi@latest init <project-name>
```

npx

Open your project folder in Visual Studio Code:

```
> code <project-name>
```

Install the dependencies:

yarn **npm** **pnpm** **bun**

```
> yarn install
```

yarn

Development Server

Now you'll be able to start your Nuxt app in development mode:

yarn **npm** **pnpm** **bun**

```
> yarn dev -o
```

yarn

🌟 **Well done! A browser window should automatically open for http://localhost:3000.**

Next Steps

Now that you've created your Nuxt 3 project, you are ready to start building your application.
