

<NuxtLoadingIndicator>

The `<NuxtLoadingIndicator>` component displays a progress bar on page navigation.

Examples

Basic Usage

Add `<NuxtLoadingIndicator/>` in your `app.vue` or layouts.

```
<template>
  <NuxtLayout>
    <div>
      <NuxtLoadingIndicator /> <!-- here -->
      <NuxtPage />
    </div>
  </NuxtLayout>
</template>
```

app.vue

Open on StackBlitz

If you are changing layouts as well as page, the page transition you set here will not run. Instead, you should set a layout transition.

Slots

You can pass custom HTML or components through the loading indicator's default slot.

Props

- **color:** The color of the loading bar. It can be set to `false` to turn off explicit color styling.
- **height:** Height of the loading bar, in pixels (default `3`).
- **duration:** Duration of the loading bar, in milliseconds (default `2000`).
- **throttle:** Throttle the appearing and hiding, in milliseconds (default `200`).

This component is completely optional. To achieve full customization, you can implement your own one based on [this file](#).
