# Assets Directory

The `assets/` **directory** is used to add all the website's assets that the build tool (webpack or Vite) will process.

The directory usually contains the following types of files:

- Stylesheets (CSS, SASS, etc.)

- Fonts

- Images that won't be served from the `public/` directory.

If you want to serve assets from the server, we recommend taking a look at the `public/` directory.
