Table of Contents ⟩

nuxi init

```
npx nuxi init|create [--verbose|-v] [--template,-t] [dir]
```

The `init` command initializes a fresh Nuxt project using unjs/giget.

Options

Option	Default	Description
`--template, -t`	`v3`	Specify template name or git repository to use as a template. Format is `gh:org/name` to use a custom github template.
`--force`	`false`	Force clone to any existing directory.
`--offline`	`false`	Do not attempt to download from github and only use local cache.
`--prefer-offline`	`false`	Try local cache first to download templates.
`--shell`	`false`	Open shell in cloned directory (experimental).

Environment variables

- `NUXI_INIT_REGISTRY` : Set to a custom template registry. (learn more).

- Default registry is loaded from nuxt/starter/templates
