- Rendering Optimizations: Today and Tomorrow

- Nuxt Image: Performance and Status

🗺️ Roadmap

In roadmap below are some features we are planning or working on at the moment.

💡 Check Discussions and RFCs for more upcoming features and ideas.

Milestone	Expected date	Notes	Description
SEO & PWA	2023	nuxt/nuxt#18395	Migrating from nuxt-community/pwa-module for built-in SEO utils and service worker support
DevTools	2023	–	Integrated and modular devtools experience for Nuxt

Milestone	Expected date	Notes	Description
Scripts	2023	nuxt/nuxt#22016	Easy 3rd party script management.
Fonts	2023	nuxt/nuxt#22014	Allow developers to easily configure fonts in their Nuxt apps.
Assets	2023	nuxt/nuxt#22012	Allow developers and modules to handle loading third-party assets.
A11y	2023	nuxt/nuxt#23255	Accessibility hinting and utilties
Translations	-	nuxt/translations#4 (request access)	A collaborative project for a stable translation process for Nuxt 3 docs. Currently pending for ideas and documentation tooling support (content v2 with remote sources).

📦 Core Modules

In addition to the Nuxt framework, there are modules that are vital for the ecosystem. Their status will be updated below.

Module	Status	Nuxt Support	Repository	Description
Auth	Planned	3.x	`nuxt/auth` to be announced	Nuxt 3 support is planned after session support
Image	Active	2.x and 3.x	nuxt/image	Nuxt 3 support is in progress: nuxt/image#548
I18n	Active	2.x and 3.x	nuxt-modules/i18n	See nuxt-modules/i18n#1287 for Nuxt 3 support

Release Cycle

Since January 2023, we've adopted a consistent release cycle for **Nuxt 3**, following semver. We aim for major framework releases every year, with an expectation of patch releases every week or so and minor releases every month or so. They should never contain breaking changes except within options clearly marked as `experimental` .

📅 Ongoing Support for Nuxt

Going forward from v3, we commit to support each major version of Nuxt for a minimum of a year after the last release, and to providing an upgrade path for current users at that point.

Current Packages

The current active version of Nuxt is **v3** which is available as `nuxt` on npm with the `latest` tag.

Nuxt 2 is in maintenance mode and is available on npm with the `2x` tag. It will reach End of Life (EOL) on December 31st, 2023 at the same time as Vue 2 does.

Each active version has its own edge releases which are generated automatically. For more about enabling the Nuxt 3 edge channel, see the edge channel docs.

Release		Initial release	End Of Life	Docs
4.x (scheduled)		2024 Q1		
3.x (stable)	v3.7.4	2022-11-16	TBA	nuxt.com
2.x (maintenance)	v2.17.1	2018-09-21	2023-12-31	v2.nuxt.com
1.x (unsupported)	v1.4.5	2018-01-08	2019-09-21	

Support Status

Status	Description
Unsupported	This version is not maintained any more and will not receive security patches
Maintenance	This version will only receive security patches
Stable	This version is being developed for and will receive security patches
Development	This version could be unstable
Scheduled	This version does not exist yet but it planned
