Search `CTRL` `K`

`<NuxtErrorBoundary>`

The `<NuxtErrorBoundary>` component handles client-side errors happening in its default slot, using Vue's `onErrorCaptured` hook.

Events

- `@error` : Event emitted when the default slot of the component throws an error.

```
<template>
  <NuxtErrorBoundary @error="logSomeError">
    <!-- ... -->
  </NuxtErrorBoundary>
</template>
```

Slots

- **#error**: Specify a fallback content to display in case of error.

```
<template>
  <NuxtErrorBoundary>
    <!-- ... -->
    <template #error="{ error }">
      <p>An error occurred: {{ error }}</p>
    </template>
  </NuxtErrorBoundary>
</template>
```
